                                                                                                                                       antigen, designated Mi-2. The sequence numbering given in the specification starts at amino acid 2, i.e. the first Met residue is omitted. The protein is hydrophilic, acidic and protruding regions of the protein are characteristic of helicases. The gene corresponding to the cDNA (AAT32301) encoding Mi-2, was localised to chromosome 12 (12p13). The DNA can be used for the recombinant production of Mi-2 which is used for, e.g. the differential diagnosis of collagen diseases, esp. dermatomyositis, e.g. by immunoassay or Western blotting.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          immunosuppressant and cytostatic activity. The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities such as: Immune system suppression, Activin/inhibin activity, chemotactic/chemokinetic activity, haemostatic and thrombolytic activity, cancer diagnosis and therapy, drug screening, assays for receptor activity, arthritis and inflammation, leukaemias and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        C.N.S

The polynucleotides are useful in gene therapy. A composition containing a polypeptide or polynucleotide of the invention may be used to treat diseases of the peripheral nervous system, such as peripheral nervous injuries, peripheral neuropathy and localised neuropathies and central nervous system diseases, such as Alzheimer's, Parkinson's disease, Huntington's disease, amyotrophic lateral sclerosis, and Shy-Drager Syndrome. Other uses include the utilisation of the activities entry to the content of the activities are the second of the content of the activities are the second of the content of the activities are the second of the content of the activities are the second of the content of the activities are the second of the content of the activities are the second of the content of the activities are the second of the content

compound that modulates (i) SpillO dimerisation; (ii) SpillO binding to a nuclear hormone receptor; (iii) binding of an SpillO dimer to an SpillO-binding nucleotide sequence and in a screening method for identifying a polypeptide that dimerises with SpillO to form a constitutively active or hyperactive or inactive heterodimer. It is useful for diagnosing primary biliary cirrhosis (PBC) and is also useful for producing SpillO-specific antibodies, for inhibiting viral replication and facilitating differentiation of cells, e.g. myeloid cells, and activation of cells involved in host defence, to treat myeloid malignancies, to enhance cellular defence mechanisms, to treat inflammation, to achieve alteration in lipid profiles, to block estrogen receptors in treatment estrogen responsive tumours, and for treating obesity. The present sequence represents the human SpillO polypeptide. The invention relates to cloning and characterisation of a cDNA encoding Sp110 (speckled 110), a novel 110 kDa polypeptide component of the nuclear body. The Sp110 polypeptide comprises a Sp100-11ke domain, a SAND domain, a plant homeobox domain, and a bromodomain. Sp110 functions as an activator of gene transcription and serves as a nuclear hormone receptor co-activator. Sp110 is useful in screening for identifying a compound that modulates (i) Sp110 dimerisation; (ii) Sp110 binding to a

Since there are no start or stop codons, the insert does not contain the entire gene. The clone may be used as a DNA probe to isolate DNA encoding additional portions of the human antigens. This DNA and the protein encoded by expressing anti-Mi-2 autoantibodies, and to diagnose dermatomyositis.

The invention useful in developmental biology and in elucidating cell signalling and insecticides, therapeutics in higher eukaryotes for the development of discloses genomic DNA sequences (ABL16176-ABL30511), expressed DNA sequences (ABL01840-ABL16175) and the encoded proteins (ABB57737-ABB72072). The sequence data for this patent did not form part of the printed specification, but was obtained in electronic format directly from WIPC at the company of the company of the printed specification, but was obtained in electronic format directly from WIPC at the company of the company of the printed specification.

                                                                                                                                                                                                                                                                                                                                                           molecules have been determined. Primers for synthesising the full length CDNA are useful for clarifying the function of the protein encoded by the CDNA. The full length clones were obtained by construction of full length enriched cDNA libraries that were synthesised by the oligo-capping method. The primers enable the production of the full length cDNA easily without any special methods. The present sequence is a polypeptide encoded by a full length human cDNA of the invention.

Note: The sequence data for this patent did not form part of the printed specification, but was obtained in CD-ROM format directly from EPO.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               Human; full length cDNA; cDNA synthesis; oligo-capping.
                                                                                                                                                                                                                                                                                                                                     Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  The invention relates to primers for synthesising full length cDNA

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              δõ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      B
                                              CC The invention relates to cloning and characterisation of a cDNA encoding CC Spl10 (speckled 110), a novel 110 kDa polypeptide component of the CC nuclear body. The Spl10 polypeptide comprises a Spl00-like domain, a CC SAND domain, a plant homeobox domain, and a bromodomain. Spl10 functions CC receptor co-activator. Spl10 is useful in screening for identifying a CC compound that modulates (i) Spl10 dimerisation; (ii) Spl10 binding to a conclear hormone receptor; (iii) binding of an Spl10 dimer to an Spl10-cc binding nucleotide sequence and in a screening method for identifying a CC polypeptide that dimerises with Spl10 to form a constitutively active or hyperactive or inactive heterodimer. It is useful for diagnosing primary CC bilary cirrhosis (PBC) and is also useful for producing Spl10-specific cantibodies, for inhibiting viral replication and facilitating cC differentiation of cells, e.g. myeloid cells, and activation of cells cells, e.g. myeloid cells, and activation of cells cellular defence mechanisms, to treat myeloid malignancies, to enhance CC cellular defence mechanisms, to treat inflammation, to achieve cellular defence mechanisms, to treat inflammation, to achieve the nuclear body.

CC sequence represents the human Spl40 polypeptide, which recruits Spl10
Sequence
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Novel substantially pure polypeptide component of the nuclear body, speckled 110, useful in screening methods, in clinical diagnostic methods, and for treating myeloid malignancies, inflammation and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 Sp110; speckled 110; nuclear body; gene transcription; dimerisation; nuclear hormone receptor; primary biliary cirrhosis; PBC; human; Sp1
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             ABB07637 standard; Protein;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                This sequence represents the leukocyte specific protein, Sp140 of the invention. The Sp140 polypeptides act as gene transcription regulators. They can be used to develop products for use in the diagnosis and treatment of autoimmune diseases such as primary biliary cirrhosis,
                                                                                                                                519
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                New isolated gene transcription regulator, \mbox{Sp140} - used products for the diagnosis and treatment of auto-immune viral infections or cancers

                                                                                                                                                                                                                                                                                                           (II). (II) is useful for generating antibodies against it, detecting or quantitating a polypeptide in tissue, as molecular weight markers and as a food supplement. (II) and its binding partners are useful in medical imaging of sites expressing (II). (I) and (II) are useful in reating disorders involving aberrant protein expression or biological activity. The polypeptide and polynucleotide sequences have applications in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits to assess biodiversity and to produce other types of data and products dependent on DNA and amino acid sequences. ABG00010-ABG30377 represent novel human diagnostic amino acid sequences of the invention.

Note: The sequence data for this patent did not appear in the printed specification, but was obtained in electronic format directly from WIPO
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          Human; chromosome mapping; gene mapping; gene therapy; forensic; food supplement; medical imaging; diagnostic; genetic disorder.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The invention relates to isolated polynucleotide (I) and polypeptide (II) sequences. (I) is useful as hybridisation probes, polymerase chain reaction (PCR) primers, oligomers, and for chromosome and gene mapping, and in recombinant production of (II). The polynucleotides are also used in diagnostics as expressed sequence tags for identifying expressed genes. (I) is useful in gene therapy techniques to restore normal activity of (II) or to treat disease states involving
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          New isolated polynucleotide and encoded polypeptides, useful in diagnostics, forensics, gene mapping, identification of mutations responsible for genetic disorders or other traits and to assess biodiversity
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          31-MAR-2000; 2000US-0540217.

Title: Perfect score: Sequence: US-09-509-595B-2
2902
1 MATDAALRRLLRLHRTEIAV......DGILQWAIQSMARPAAPFPS 545 March 13, 2003, 17:50:47; Search time 14 Seconds (without alignments) 1614.614 Million cell updates/sec

Scoring table: BLOSUM62 Gapop 10.0 , Gapext 0.5

Searched:

112892 seqs, 41476328 residues

Total number of hits satisfying chosen parameters:

Minimum DB seq length: 0
Maximum DB seq length: 2000000000

Post-processing: Minimum Match 0% Maximum Match 100% Listing first 45 summaries

Database : SwissProt\_40:\*

Pred. No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  Bjorses P., Pelto-Huikko Ulmanen I.;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               SUBCELLULAR LOCATION MEDLINE-99135905; Pul
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             8
                                  nuclear receptors.

DOMAIN: The HSR domain is required for localization on tubular structures (N-terminal part) and for homodimerization.

DOMAIN: Disruption of the first PHD domain has been shown to 10
                                                                                                                                                      splicing.

TISSUE SPECIFICITY: Widely expressed. Expressed at higher level thymus (medullary epithelial cells and monocyte-dendritic cells) pancreas, adrenal cortex, and testis. Expressed at lower level i the spleen, fetal liver and lymph nodes. Isoforms 2 and 3 seem the test irequently expressed than isoform 1, if at all DOMAIN: The L-X-Z-L-L repeats may be implicated in binding to
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           FUNCTION: Probable transcriptional regulator protein that binds DNA as dimer and tetramer, but not as a monomer. Binds to G-doublets in an A/T-rich environment; the preferred motiv is a tandem repeat of ATTGGTTA combined with a TTATTA-box. May be involved in immune regulation.

SUBUNIT: Homodimer and homotetramer. Interacts with CREBBP.

SUBCELLULAR LOCATION: Nuclear and cytoplasmic; associated with the combined with a succession of the combined with the com
                                                                                                                                                                                                                                                                                                                                                                                                   tubular structures and in discrete nuclear dots ressembling ND10 nuclear bodies. May shuttle between nucleus and cytoplasm. ALTERNATIVE PRODUCTS: At least 3 isoforms; 1/AIRE-1 (shown here). 2/AIRE-2 and 3/AIRE-3; may be produced by alternative
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           Biol.
